Visitor Safety Management System

VSMS

A Smart, QR-Based Safety Induction
and Access Solution

Simplify Visitor Entry. Ensure Safety Compliance.

VSMS is an intelligent, QR-enabled application that manages visitor safety induction, verification, and check-in process—efficiently and securely.

How It Works

1. QR Code Scan at Entry

Visitors scan a QR code displayed at the plant's Time Office area using their mobile phone.

2. Easy Sign-Up

A digital form opens on the visitor's phone. They enter their details and proceed.

3. Multilingual Induction Videos

Visitors choose their preferred language (English, Tamil, or Hindi) to watch the safety induction video.

4. Mandatory Induction Assessment

- After the video, visitors must answer 3 out of 5 safety-related questions.
- A VIP Code can be entered to skip the questions if permitted.

5. Digital Pass Generation

Upon successful completion, a PDF Pass is generated with a unique QR code.

- Option to download or show on mobile.
- This pass is valid for 45 days.

6. Security Gate Check-In

At the entry gate, security personnel scan the QR code using the VSMS Security App, verify the pass, and press "Check-In" to allow entry.

Repeat Visits Made Easy

After 45 days, visitors must repeat the induction process to ensure continued safety awareness. The video and questions can be updated anytime by the admin.

Administrator Web Dashboard

- Track daily Check-In /Check-Out data
- Customize induction videos and questions
- View visitor history and analytics

Key Benefits

- Contactless, paperless visitor management
- Supports multi-language safety training
- Real-time tracking and data access
- Enhances plant security and compliance
- Customizable content and question bank
- Simple VIP access override option

Who Can Use VSMS?

- Manufacturing Plants
- Warehouses
- Power Plants
- Construction Sites
- Corporate Offices with restricted zones

Your Safety, Our Priority.

VSMS ensures every visitor is safety-aware before stepping into your facility.
